

Unique Transport Information System

The new dimension of truck dispatching

INTRODUCTION

DispatchX is a SaaS platform which increases efficiency of dispatchers, provides better routes for truck drivers and creates more business for carrier companies. It is available online and from multiple devices. It's a lightweight solution, which still provides all the necessary tools for a carrier company to manage their loads, their delivery, and relationships with brokers and drivers. Our multi and single-tenant solutions can scale to meet the needs of any organization, no matter what the size.

DispatchX speeds up the whole process and increases efficiency of current carrier staff in their daily work, while also ensuring higher quality service to their beneficiaries. It does so by providing smart tech solutions to dispatchers and drivers for the mutual benefit of both.

A wide-angle photograph of a long, straight asphalt road stretching into the distance. The road is flanked by dry, brownish hills under a clear blue sky. A yellow arrow sign points to the right on the left side of the road. In the far distance, a blue truck is visible on the road.

“We’ll ensure that you focus on the opportunities!”

DispatchX MODULES

DispatchX application is based on different Modules, tailor-made for different roles in a carrier company. Every employee in a carrier company has their own environment, but yet they are all on the same place and dispose with all the information.

Dispatch Module is made to help the dispatchers in their daily work. Overview of daily tasks, Timeline with updated information of loads and drivers status, fast and easy way to enter the loads are their ideal environment where dispatchers can work smoothly and increase their efficiency.

Accounting Module is intended for accounting managers so they can easily collect all the loads, make the statements, do the invoicing and have all updated information from drivers, brokers, factoring companies. With smart notifications, they have real-time additional information about possible issues on the loads or during the billing process. With Accounting Module, all the billing process in a carrier company becomes peace of cake.

Database Module is unique base of all necessary data. All the assets important for a carrier company can be stored here. This Module can use all employees and all of them can find relevant information for themselves. On the other hand, Database Module will not bury you with redundant information.

Statistic Module brings carrier company plant of various interesting and important information. It provides results of drivers and dispatchers work and gives the opportunity for analysis. With good analysis, carrier company can use these data and improve their process, make the individuals more efficient and increase its revenue.

Assign Module keeps the important assets together and makes work much easier for everyone. It provides assigning trucks and trailers to a driver, but also assigning drivers to dispatchers. These links will slip through application reducing searching time for everyone.

DATABASE MODULE

Database Module is foundation of DispatchX and foundation for every Carrier Company. All necessary information and assets are based here. It's a detailed database of all the assets that a carrier has at its disposal, which gives carriers a better overview of what they have available. Information about drivers, trucks, trailers and employees are stored here and are available for all users.

Beside this, DispatchX Database Module provides users the unique and complete database of all freight Broker companies, registered in FMCSA. This base is constantly updated, and every carrier company can additionally customize it for itself.

A wide-angle photograph of a desert landscape. A paved road with yellow double lines leads from the bottom center towards the horizon. The terrain is rocky and arid, with sparse vegetation. The sky is bright blue with scattered white clouds.

“Focus on bringing new business instead of spending hours and hours on the administration side”

Unique place for storage all the data brings additional value for carrier company, not imposing the headache and cost for additional storage. All the data are classified and easy for use and search. It significantly improves the daily work for every employee, speed up the processes and reduces the possibility of transmitting wrong information.

ASSIGN MODULE

An easy way to link important entities and speed up steps in daily operations. Assigning drivers, truck and trailers will provide this link through all Modules in DispatchX, so all users will have information about who is driving what. This is significant for the safety managers and administrators. On the other hand, these links helps dispatchers to have better overview and to quickly provide these information to Brokers.

Second important thing about Assign Module is that dispatchers can assign drivers to themselves. This way, they can easily track and work only with specific drivers and focus on them, instead to have a bunch of drivers that they are not in charge for. Managers can clearly see who is responsible for which driver and to monitor work and efficiency of the dispatchers.

✕ Valuable Feature – Tracking Trailer

In DispatchX we have provided possibility to have information about dropped trailers. With this record, carriers will never again lost information about trailers which has been dropped and its locations. With Tracking Trailer feature turned on in Assign Module, system will ask user to write down information about dropping location before he/she unassigne trailer from the driver. Every user will have this information so there will be no more losing time in contacting drivers, dispatchers and others, trying to get the information about where some trailer is located. Also, this way the dispatcher would know what trailers are available for use, and where the drivers can collect it.

How much time do the manager need to find out what dispatcher dispatching which driver, which driver drives which truck, and/or trailer? Probably half and hour or more on the telephone with everybody...

✕ DispatchX Assign Module brings you answers for every dispatcher, driver, truck or trailer in a few second ✕

DISPATCH MODULE

In Dispatch Module is placed everything that is necessary for making dispatchers work easy, fast and more efficient. There is Dispatch Board with daily dynamic Timeline, list of all booked loads and page integrated with brokers sites*, that offer dispatchers available loads suits for their drivers.

Dispatch Timeline is imagin to by dispatchers daily environment wher they can follow up assigned drivers, their loads and statuses. It brings dispatchers all updated information and speeds up their workflows during the day.

Reviews From Our Team

CURRENTLY, 1 DISPATCHER CAN SERVE ON AVERAGE A 5 TRUCKS A DAY. WITH DISPATCHX HE/SHE WILL BE ABLE TO SERVE 8 TRUCKS, WHICH WILL BRING 4500-6000\$ MORE PER DAY. THIS SIGNIFICANTLY INCREASES THE LOADS/PROFIT FOR CARRIERS.

DISPATCHX TEAM

Together, with preview of all booked loads and available loads from brokers sites, Dispatch Module can enhance dispatchers work and bring company significant higher revenu.

*Will be available in Q4 2024.

Ice&T Solutions

Dispatch Board and Timeline

In DistachX, we primarily wanted to create most comfortable environment for dispatcher as important stakeholders in one carrier company. Therefor, we provide them Dispatch Board with Timeline, which is made to be dispatcher’s everyday overview sheet.

Dispatch Board shows to dispatcher all the drivers that he/she is working with, their current locations, loads that they are assigned on, and plans for the next job. All the information needed for everyday work is here, and provided to dispatchers, as well as easy actions and features for updating information, communication with drivers and brokers and entering new loads.

This is the access to complete schedule and all accompanying capabilities right from within the DispatchX Dispatch Board. Loads can be tracked and updated in real time across the system allowing dispatchers and admin staff to work in union. Real time status tracking provide fast and easy information exchange between shifts or with brokers.

Additionally, dispatchers can add other drivers, assigned on other dispatchers, on temporary list and help their colleagues to cover drivers, finish all the tasks and improving team work and cooperation.

Valuable Feature – Load entry on one click

Dispatchers mostly hate TMSs because they need to spend their time on entering loads with bunch of information. Traditional way of entering the load implies that dispatcher need to enter a lot of data by hand, risking to make mistake, and spending lot of time on it. In DispatchX, we use smart tools to overcome this problem and provide dispatchers to enter entire load in a modern, new way. Instead spending 10 minutes of their precious time doing this work in old fashioned way, with DispatchX, dispatcher spend up to 5 seconds to enter new load, doing it by literally one click.

When the dispatcher book the load with a Broker, and get the rate confirmation, all he/she need to do is to click on New Load button and upload the pdf document. The system recognize all important information from the document, link these information with selected driver, truck and trailer and the job is done! The new load is successfully saved in the DispatchX!

With this functionality, dispatchers and the carrier companies dramatically save the time on administration and use this time to search for more loads, cover more drivers and make more profit at the same time.

✕ Valuable Feature – Automatic calculating miles

During the work, dispatchers are doing lot of calculation, trying to get best rates for the loads. To help them with this, DispatchX doing this work instead of dispatcher. DispatchX smart engines take the start position for drivers, conuting the miles to pick up location, and then to destination location. Just with entering pickup and delivery locations, dispatchers get all empty and loaded miles automatically calculated in the system. This information can be used later in many situations. For instance, to get the average rates, to calculate fuel costs, and many other significant things.

Order	Type	City	Date	Empty	Loaded	Remove stop
A	START	CHICAGO, IL, 60601	08/26/2023	/	/	
B	PICK UP	AURORA, IL, 60502	12/16/2023 4:30 PM	39.54	/	
C	DELIVERY	BISMARCK, ND, 58504	12/17/2023 10:45 AM	/	824.94	
Total:				39.54	824.94	

✕ Valuable Feature – Quick dispatching the drivers

After booking load and entering it in the system, dispatchers can use function of quick dispatching the drivers by sending them load information on one click. By clicking on button Send mail to driver, DispatchX takes all the informatin of the load, such as load number, pickup and delivery address, times and other information and send it directly to drivers email. There is no more need to copy and paste, printing the screens, use of diferent communitations channels, wrong informations and losing time.

Powered by

Ice&T Solutions

✕ Valuable Feature – ELD Warnings

Important thing for every dispatcher in making the weekly plan for the driver is to take care of available working hours. In order not to make violation, driver and dispatcher need to be in every day communication on this matter and to calculate rest of the available working hours. DispatchX smart tools helps them in this important job. Backend algorithms doing the calculation after every entered load, take into account empty, loaded miles, average driving speed, time for loading and notify the dispatcher before the critical moment. When DispatchX recognize the critical point when violaton could be done, the system shows to dispatcher warning of potential problem. In that way, dispatcher knows how much time left to driver for being on duty and suggest how long next load can he/she book. Risk of being in violation in this case is minimized.

Technology is nothing. What's important is that you have faith in people, that they're basically good and smart, and if you give them TOOLS, they'll do wonderful things with them.

is an effective tool in a hands of carriers

Loads List

The database of all booked loads provide to users insight of everything that carrier staff and drivers have done. Intuitive preview through different status colors gives to users possibility to organize and manage their work much faster and much easier. All the important information are in the list and all can be sorted and/or filtered by different criteria. This way, every user can easily find what he/she searching for and get the information in a moment. Quick preview can provide user an instant information, and just on a double click brings him/her in an edit mode, so the job can be done immediately.

Available Loads*

Integration of DispatchX with brokers sites leads carrier companies to the next level of dispatching. On one side, for every driver carrier can define list of driver's preferences, linked to drivers profile in DispatchX Database Module. All the criteria that drivers preferred when choosing the load are stored here. On the other side, DispatchX is connected with brokers sites with available loads, and can offer these loads to dispatcher, through the Dispatch Board. Before offering a bunch of loads, DispatchX smart engines filter the loads from brokers site, compare it with specific driver's preferences and suggest to dispatchers loads that fits best to specific driver.

There is no need for searching a tusen of brokers site searching for perfect load any more. There is no need for switching from portal to portal. All one dispatcher needs is here on one single platform called DispatchX. It saves time for dispatchers, decrease negotiation process and offers driver the loada that they like the most.

*Will be available in Q4 2024.

STATISTIC MODULE

Statistical data plays a pivotal role in the growth of a company by providing valuable insights into various aspects of its operations, trends, and behavior. By analyzing statistical data, businesses can identify patterns, trends, and correlations that enable informed decision-making. This data-driven approach helps in optimizing processes, enhancing efficiency, and reducing operational costs. Moreover, statistical analysis aids in forecasting future market demands and potential risks, enabling companies to adapt their strategies accordingly and stay competitive. Overall, leveraging statistical data empowers companies to make well-informed strategic decisions that drive sustainable growth and success.

DispatchX Statistic Modul gives important informations and data of drivers and dispatchers activities. Starting from the operational data like driven loads and miles, over the quality performance reflected through average rates, up to monetizing success, such as gross revenue. There is also data about most preferred brokers and engagement of dispatchers with assigned drivers.

With all these data collected on one place, managers and team leaders can easily make further decisions in order to optimize work process, improve company's performance and increase revenue.

MOST IMPORTANT DISPATCHX BENEFITS

Automation is not about replacing humans. It is about amplifying our potential.

Panayiotis Philimis, Founder of CyRIC

Unique database

With DispatchX carrier company gets **uniqu database** off all data of interest to all categories of employed users. Everything is on one place, available to all users and easy for update. In this way, data exchange is significantly more efficient and accurate. The whole database is relational and segmentet, so there will not be confused organisations in thousands of folders. At the end, there is **no need** for additional storages and **unnecessary costs** of additional cloud or on premise solutions.

Notifications

DispatchX notification system runs through the entire application. All important **deadlines** are checked every day and application push reminders to the users. This saves not just time for every user role, but also **saves money**, reminding them for important tasks before expiration dates. DOTs, insurance, medical reports, CLDs... These are just several vital items that can make huge troubles and high cost if it's not updated on time. With DispatchX notification system, carrier companies and its employees do not have to worry about deadlines, to keep records or to sets the alerts. DispatchX will do it for them.

Rate confirmation recognition

Smart engine for recognition of brokers rate confirmations brings new dimension of dispatching process. With **no need for manual input** whole bunch of information in the system, DispatchX becomes significant tool for dispatchers, helping them in their everyday obligations. Dispatchers will not spent their time on bureaucracy. Instead of that, they will have more time for searching the better loads, and even **dispatch more drivers**.

Time saving

Saving time in dispatch processes is crucial for **improving efficiency, productivity, and overall profitability**. By streamlining workflows and reducing time-consuming tasks, carrier companies can allocate resources more effectively, focus on value-added activities, and meet deadlines more efficiently. DispatchX's automated processes, entry loads on one click, faster exchange of information, on-time actions, save time in every process in carrier companies. By this optimizing time management, carriers can foster innovation, empower employees, and create a culture of continuous improvement, ultimately driving long-term success and growth.

All processes unified

DispatchX provides the unique digital solution that **unified all the processes** in one carrier company, starting from the real time data access, over the load offering, dispatching, loads recording and tracking, all to the accounting, invoicing and payment. This unified approach enables stakeholders to make good decisions, and **adapt to market dynamics quickly**. Furthermore, DispatchX facilitate compliance with regulations, mitigate risks, and optimize resource allocation, **ultimately driving productivity** in carrier company. Using all the benefits of DispatchX, carrier companies directly can **increase their revenue**.
